Butterflies — Answer Key

Did you know?

- Monarch butterflies complete their famous migration over several generations; no single butterfly makes the entire round trip alone.
- Butterflies taste with sensors on their feet, which is how they can identify the right plant to lay eggs on just by landing.
- A chrysalis and a cocoon are not the same thing: butterflies form a chrysalis, while moths spin a silk cocoon around themselves.
- Butterfly lifespans vary enormously by species, from about a week for some to nearly a year for others that overwinter as adults.
