Did you know?

- Earth's outer layer is broken into large tectonic plates that shift slowly over time, reshaping continents over millions of years.
- The deepest point in the ocean, the Mariana Trench, is deep enough to fully submerge Mount Everest with room to spare.
- Earth is the only known planet with plate tectonics actively reshaping its surface today.
- Most of Earth's fresh water is locked away in ice caps and glaciers, not in rivers and lakes.
