Hearts — Answer Key

Did you know?

- The familiar heart shape doesn't actually resemble a real human heart at all, which has led historians to propose several competing theories for where the symbol came from.
- One theory traces the heart symbol to the seed pod of silphium, an ancient plant once associated with love and reportedly used as a form of contraception in antiquity.
- Another theory links the shape to a stylized ivy leaf or grape leaf, symbols already associated with fidelity in earlier art.
- No single origin theory for the heart symbol is fully settled among historians, and the shape likely evolved gradually rather than being invented all at once.
