Internet & Web — Answer Key

Did you know?

- The World Wide Web and the internet aren't the same thing; the internet is the network, and the web is one of many services that runs on it.
- The first website ever published is still online today, describing the World Wide Web project itself.
- Wi-Fi doesn't actually stand for anything official; the name was chosen mainly because it sounded catchy, similar to "Hi-Fi."
- Sending a single email typically bounces through several different servers before reaching its destination.
