Oceans & Seas — Answer Key

Did you know?

- The Pacific Ocean is the largest and deepest of Earth's oceans, larger than all the landmasses on Earth combined.
- The Mariana Trench, in the Pacific Ocean, contains the deepest known point in any ocean.
- The Mediterranean Sea is technically classified as a sea rather than an ocean because it is a smaller body of water partly enclosed by land.
- Ocean currents move heat around the planet, playing a major role in shaping regional climates far from the coast.
