WORDS TO FIND

ACCELERATION

AMPLITUDE

DENSITY

FREQUENCY

FRICTION

MAGNETISM

MOMENTUM

PENDULUM

PRESSURE

REFLECTION

REFRACTION

VELOCITY

VIBRATION

VOLTAGE

WAVELENGTH

Physics — Answer Key

Did you know?

- Isaac Newton's laws of motion, formulated over 300 years ago, still accurately describe how most everyday objects move.
- Sound cannot travel through a vacuum, since it needs molecules to move through, unlike light.
- Gravity gives objects weight, but their mass, the actual amount of matter they contain, stays the same everywhere in the universe.
- Friction is the force that gradually slows moving objects down, converting their motion into heat.
