## Did you know?

- Light from the Sun takes about eight minutes to reach Earth.
- Footprints left by Apollo astronauts on the Moon are expected to last millions of years, since there is no wind or water there to erode them.
- Space is not completely empty; even the vacuum between stars contains scattered atoms and particles.
- The International Space Station orbits Earth roughly every 90 minutes, so astronauts aboard see about 16 sunrises and sunsets each day.
