Did you know?

- Meteorological summer always runs from June 1 through August 31, a fixed three-month period distinct from the astronomical solstice-to-equinox definition.
- The summer solstice, the longest day of the year in the Northern Hemisphere, marks the astronomical start of the season.
- In the Southern Hemisphere, summer falls in December through February, the opposite months from the Northern Hemisphere.
- Daylight hours are at their longest right around the summer solstice, then gradually shorten again through the rest of the season.
