Trees in Autumn — Answer Key

Did you know?

- Not all trees lose their leaves in autumn; conifers like pine and spruce are evergreen and keep their needles year-round.
- A tree's age can be estimated by counting the rings visible in a cross-section of its trunk, since it typically grows one ring per year.
- Different tree species change color and drop their leaves at slightly different times, which is part of why a forest's color shifts gradually rather than all at once.
- Deciduous trees drop their leaves partly to conserve water and energy during winter months when sunlight and warmth are scarce.
