# Volcanoes — Answer Key

## Did you know?

- Not all volcanoes erupt with lava; some release mostly ash, gas and rock fragments instead.
- The "Ring of Fire" around the Pacific Ocean is home to the majority of the world's active volcanoes.
- Some volcanoes are entirely underwater, and new islands have formed from their eruptions reaching the surface.
- Molten rock is called lava only once it reaches the surface; underground, it is always referred to as magma.
