WINDPROOF

Winter Clothing — Answer Key

Did you know?

- Dressing in layers works because it traps warm air between each layer, which is a more effective insulator than a single thick garment.
- Down, one of the warmest natural insulating materials, works by trapping air in the tiny gaps between its soft, fluffy fibers.
- Many modern winter jackets use synthetic insulation specifically because, unlike down, it still keeps some warmth even if it gets wet.
- Wool naturally repels some water and retains a surprising amount of warmth even when damp, which is part of why it has stayed popular for centuries.
