Did you know?

- Curling, a real Olympic winter sport, involves sliding stones across ice toward a target while teammates sweep the ice ahead of it to control its path.
- The luge and the skeleton are both real, separate Olympic sliding sports, distinguished by whether the athlete rides feet-first or head-first down the track.
- Ice skating blades work partly because the pressure and friction of the blade create a thin, slippery layer, letting the skater glide rather than simply slide.
- Many winter sports popular today, including skiing and skating, began as practical transportation methods long before they became organized recreational activities.
