GORILLA

KOALA

LEMUR

MEERKAT

OTTER

PANDA

PEACOCK

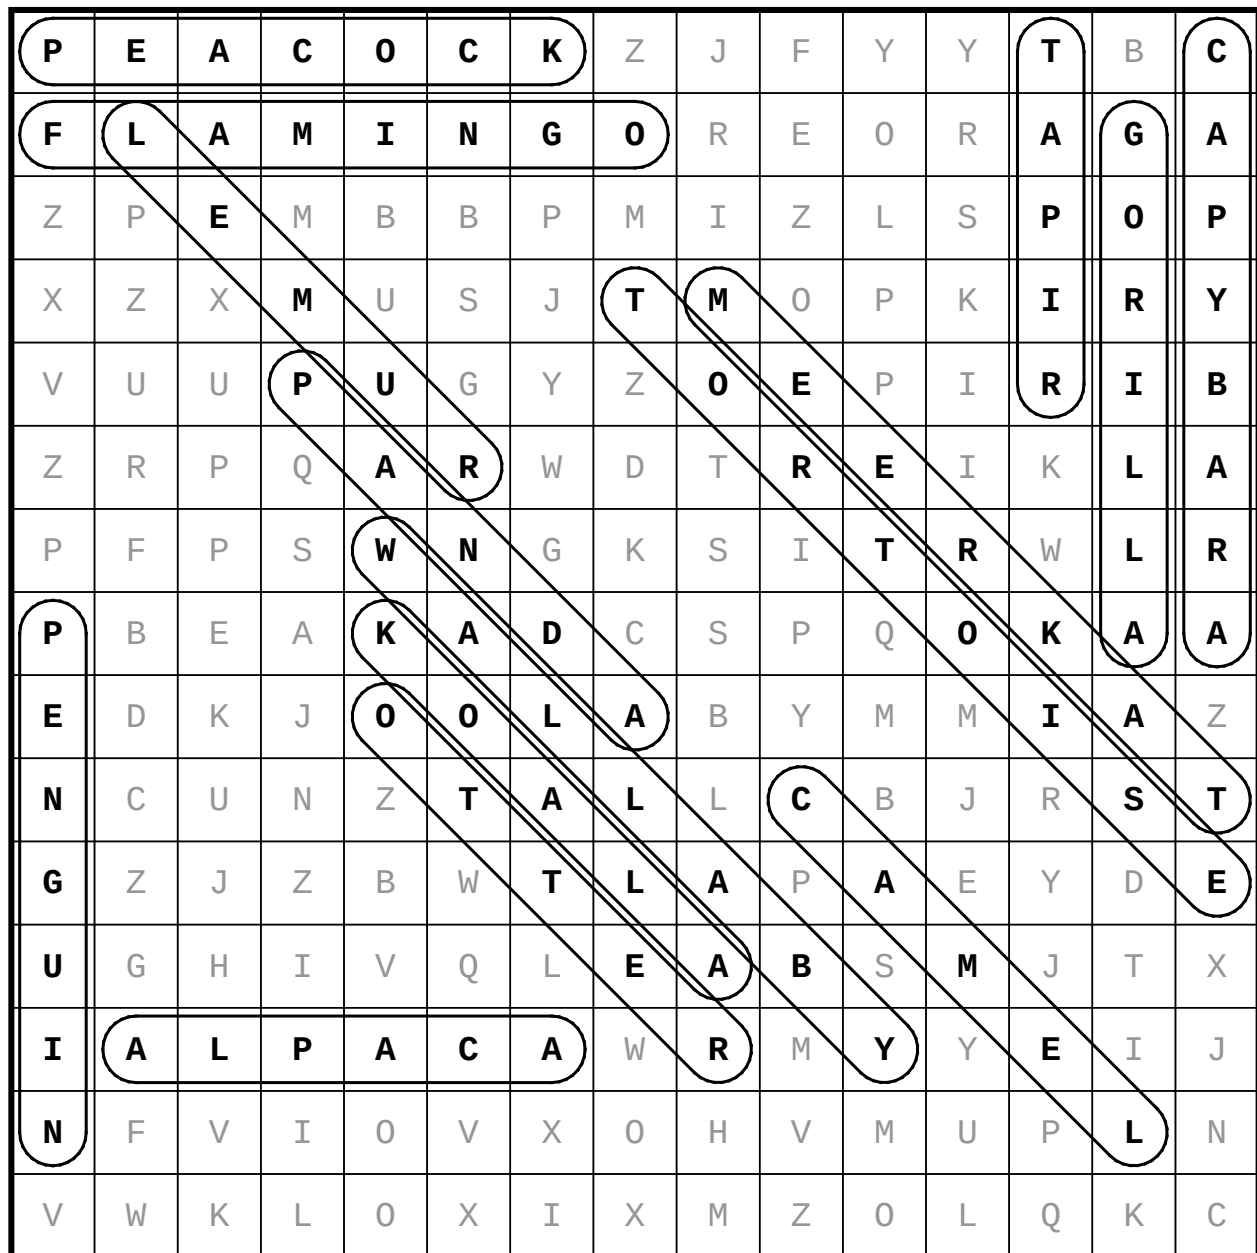

PENGUIN

TAPIR

TORTOISE

WALLABY

Zoo Animals — Answer Key

Did you know?

- Modern zoos increasingly focus on conservation breeding programs for endangered species, not just public display.
- Pandas' digestive systems are actually better suited to meat, even though they eat almost exclusively bamboo.
- Many zoo animals require specific enrichment activities, like puzzle feeders, to stay mentally stimulated in captivity.
- Some species seen commonly in zoos today, like certain rhinos, are now rarer in the wild than in captivity.
